## *A Focus on Core Competency*

---

The term "Core Competency" means to do what it is that your firm does best and stay focused on that function. What we do best at KKSP Precision Machining LLC, is to manufacture high volume screw machine parts on cam-operated, automatic, multi-spindle machines. The materials we machine are brass, free machining steel, aluminum, and stainless bar stock in sizes ranging from 1/8" up to 3" diameter. Our machines are at their most capable with medium complexity components.

We currently have 416 machines with names such as Acme Gridley, New Britain, Davenport, and Brown & Sharpe. These machines are located at four modern facilities throughout the Midwestern United States and Mexico and each facility is TS16949, ISO 9001, and ISO 14001 certified.

---

*Your company knows and understands its core business. Why not let the Team at KKSP Precision Machining LLC take on the responsibility of making your turned parts? This is our core business and it's what we do best!*
