

KKSP Precision Machining LLC

"The right tool for the right job"

It's a saying used by machinists and craftsmen the world over. The formula for success at KKSP Precision Machining is simple and the tools we use are cam-actuated screw machines run by experienced craftsmen who produce quality products for North America's best companies.

While our machines utilize proven technology, they are not CNC machines. Our machines require tolerances just slightly greater than computer aided machines. However, if your screw machine part application does not require tolerances tighter than $\pm .002$, why would you want to pay more for a part made on slower machine?

The advantage of being the largest screw machine shop of our kind in North America is that we can train our own people, rebuild our own equipment, and when coupled with our ability to purchase large volumes of raw materials at very competitive pricing, you have our formula for supply chain success.

If you have an applications for high volume screw machine components with normal tolerancing, made of free machining steel or brass, reach out for the right tool. Go to www.kksp.com/sales-rep to contact one of our sales representatives at KKSP Precision Machining LLC.
